## Solid State Relay <br> Industrial, Rear Integrated Heatsink 3-Independently Switched Poles Types RJT3A - Trio

Preliminary Datasheet

## Product Description

This product is designed in such a way as to replace elec-tro-mechanical contactors, especially when switching is frequent. It has an integrated heatsink and over-voltage protection. The heatsink is moved to the back for optimal space saving in the panel and easy wire mounting at the front of the relay.
The relay with antiparallel
thyristor output can be used for resistive and inductive loads.
RJT3A comes with 3 independently controlled poles, with three LEDs to indicate status for each of the control inputs. Each zero switching relay switches ON when the sinusoidal curve crosses zero and switches OFF when the current crosses zero.

- 3 in 1 Semiconductor contactor
- Three control inputs - three independently switched poles
- Direct copper bonding (DCB) technology
- LED indication for each pole
- Housing free of moulding mass
- Input range: 4-32 VDC
- Operational ratings: up to $3 x 25 A A C, 600 V A C$
- Non repetitive peak voltage: Up to $1200 V^{\text {p }}$
- Opto-isolation > 4000 VAC $_{\text {rms }}$
